👤 PROFILE

I'm **Jose Daniel Villa**, a 24-year-old Full-Stack Developer from Colombia focused on building scalable, intuitive digital solutions that solve real business problems. I specialize in full-stack development and automation, creating systems that eliminate repetitive tasks, streamline workflows, and integrate services through APIs, serverless functions, and modern web technologies, with a strong problem-solving mindset and a growing interest in immersive 3D web experiences.

Node.js | Three.js | Next.js | Figma | Wordpress | SQL | Python | PostgreSQL | MySQL | Docker | Firebase |
AI Integrations | Playwright | Selenium | Blender | GLSL | Twilio | Stripe | SendGrid | AWS | Mongo DB | N8N

📁 PROJECTS

ProAxis, Geeks5G

An all-in-one, white-label platform that empowers entrepreneurs to launch their own digital marketing agencies. ProAxis includes a comprehensive Training Academy, a built-in CRM for client management, team and service management tools, Stripe connected accounts for seamless payment processing, and a powerful drag-and-drop form builder. It also features integrated calendars with automated Zoom link generation and a robust commission tracking system for partners.

VerifyLead, Geeks5G

VerifyLead is a comprehensive lead management and verification platform designed for businesses to capture, validate, and nurture leads effectively. The system features embeddable forms with OTP verification, multi-channel campaign management (Email & SMS), real-time SMTP validation, and intelligent lead scoring. Built with scalability in mind, it processes thousands of leads daily with automated workflows and detailed analytics.

Trading Bot, Geeks5G

A Python-based trading bot using Alpaca for real-time trading and EODHD for historical data. It executes momentum strategies across 20+ symbols, analyzing tick data for precision.

Spa Management Dashboard, Geeks5G

A sophisticated full-stack web application for a premium spa chain with 20+ US locations, featuring comprehensive operations management, sales tracking, and HR automation.

Galaxy Generator, Personal

A visually stunning Galaxy Generator using Three.js and custom GLSL shaders. It allows users to customize galaxy parameters and demonstrates advanced WebGL techniques.

Portal Entry / Blender + Three.js, Personal

A 3D gallery space built with Three.js, allowing users to navigate a virtual environment to view projects. Features custom shaders for an engaging user experience.
